

Automated Data Integration for Databricks

Simplifying Data Ingestion for Delta Lake

Enable unified insights with quick and easy access to all of your data in minutes.

Data integration made easy for Databricks

Fivetran data pipelines are easy to set up and automatically keep up with source API and schemas changes.

Look at the whole picture

Analyze prospects and customers from every angle with comprehensive data from key applications, databases, files, and more.

Automate the pipeline experience

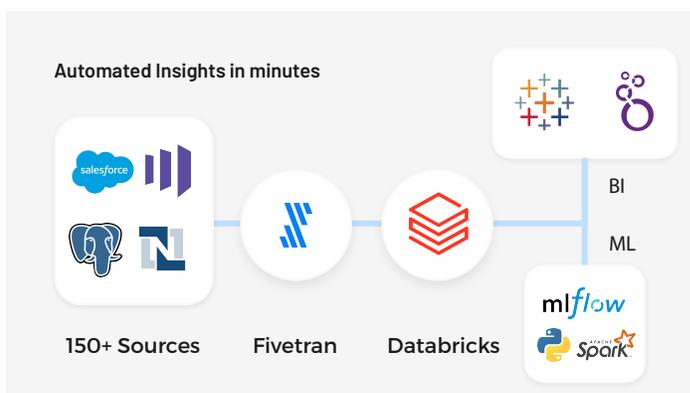

Remove friction from the data acquisition and maintenance journey with Fivetran fully managed connectors

Transform data in Databricks

Use Fivetran to automatically run Spark SQL jobs on a time or table update trigger within Databricks

And more!

Combine ready to analyze business data with machine generated data to unify the entire business in one platform.

"Databricks and Fivetran deliver a powerful unified data analytics environment by enabling customers to automate combining operational data with fast growing machine generated data for a more comprehensive view of a customer's business."

Michael Hoff, Senior VP of Business Development and Partners at Databricks.
